Quality attributes

Techniques

Quality attributes

Manual assessment is still the most frequent technique to measure quality attributes

Techniques

Quality attributes

Deep learning-based techniques have not been extensively explored for comment analysis

Which of these quality attributes are important to which developers?

Do code reviewers care more for accurate comments than complete comments? When?

How to automatically measure these quality attributes?

Can LLMs help writing better comments?

 class Window extends Example:  
 ..  
 }  
 >>> m  
>>> m  
 tensor  
 Args:  
 probs  
 logit  
 ...  
  
 Creates a one-hot categorical distribution parameterized by :attr:`probs` or  
 :attr:`logits`.  
 Window win = new Window(parent);  
 win.show();  
 Samples are one-hot coded vectors of size ``probs.size(-1)``.  
 .. note:: The `probs` argument must be non-negative, finite and have a non-zero sum.
```

Comment

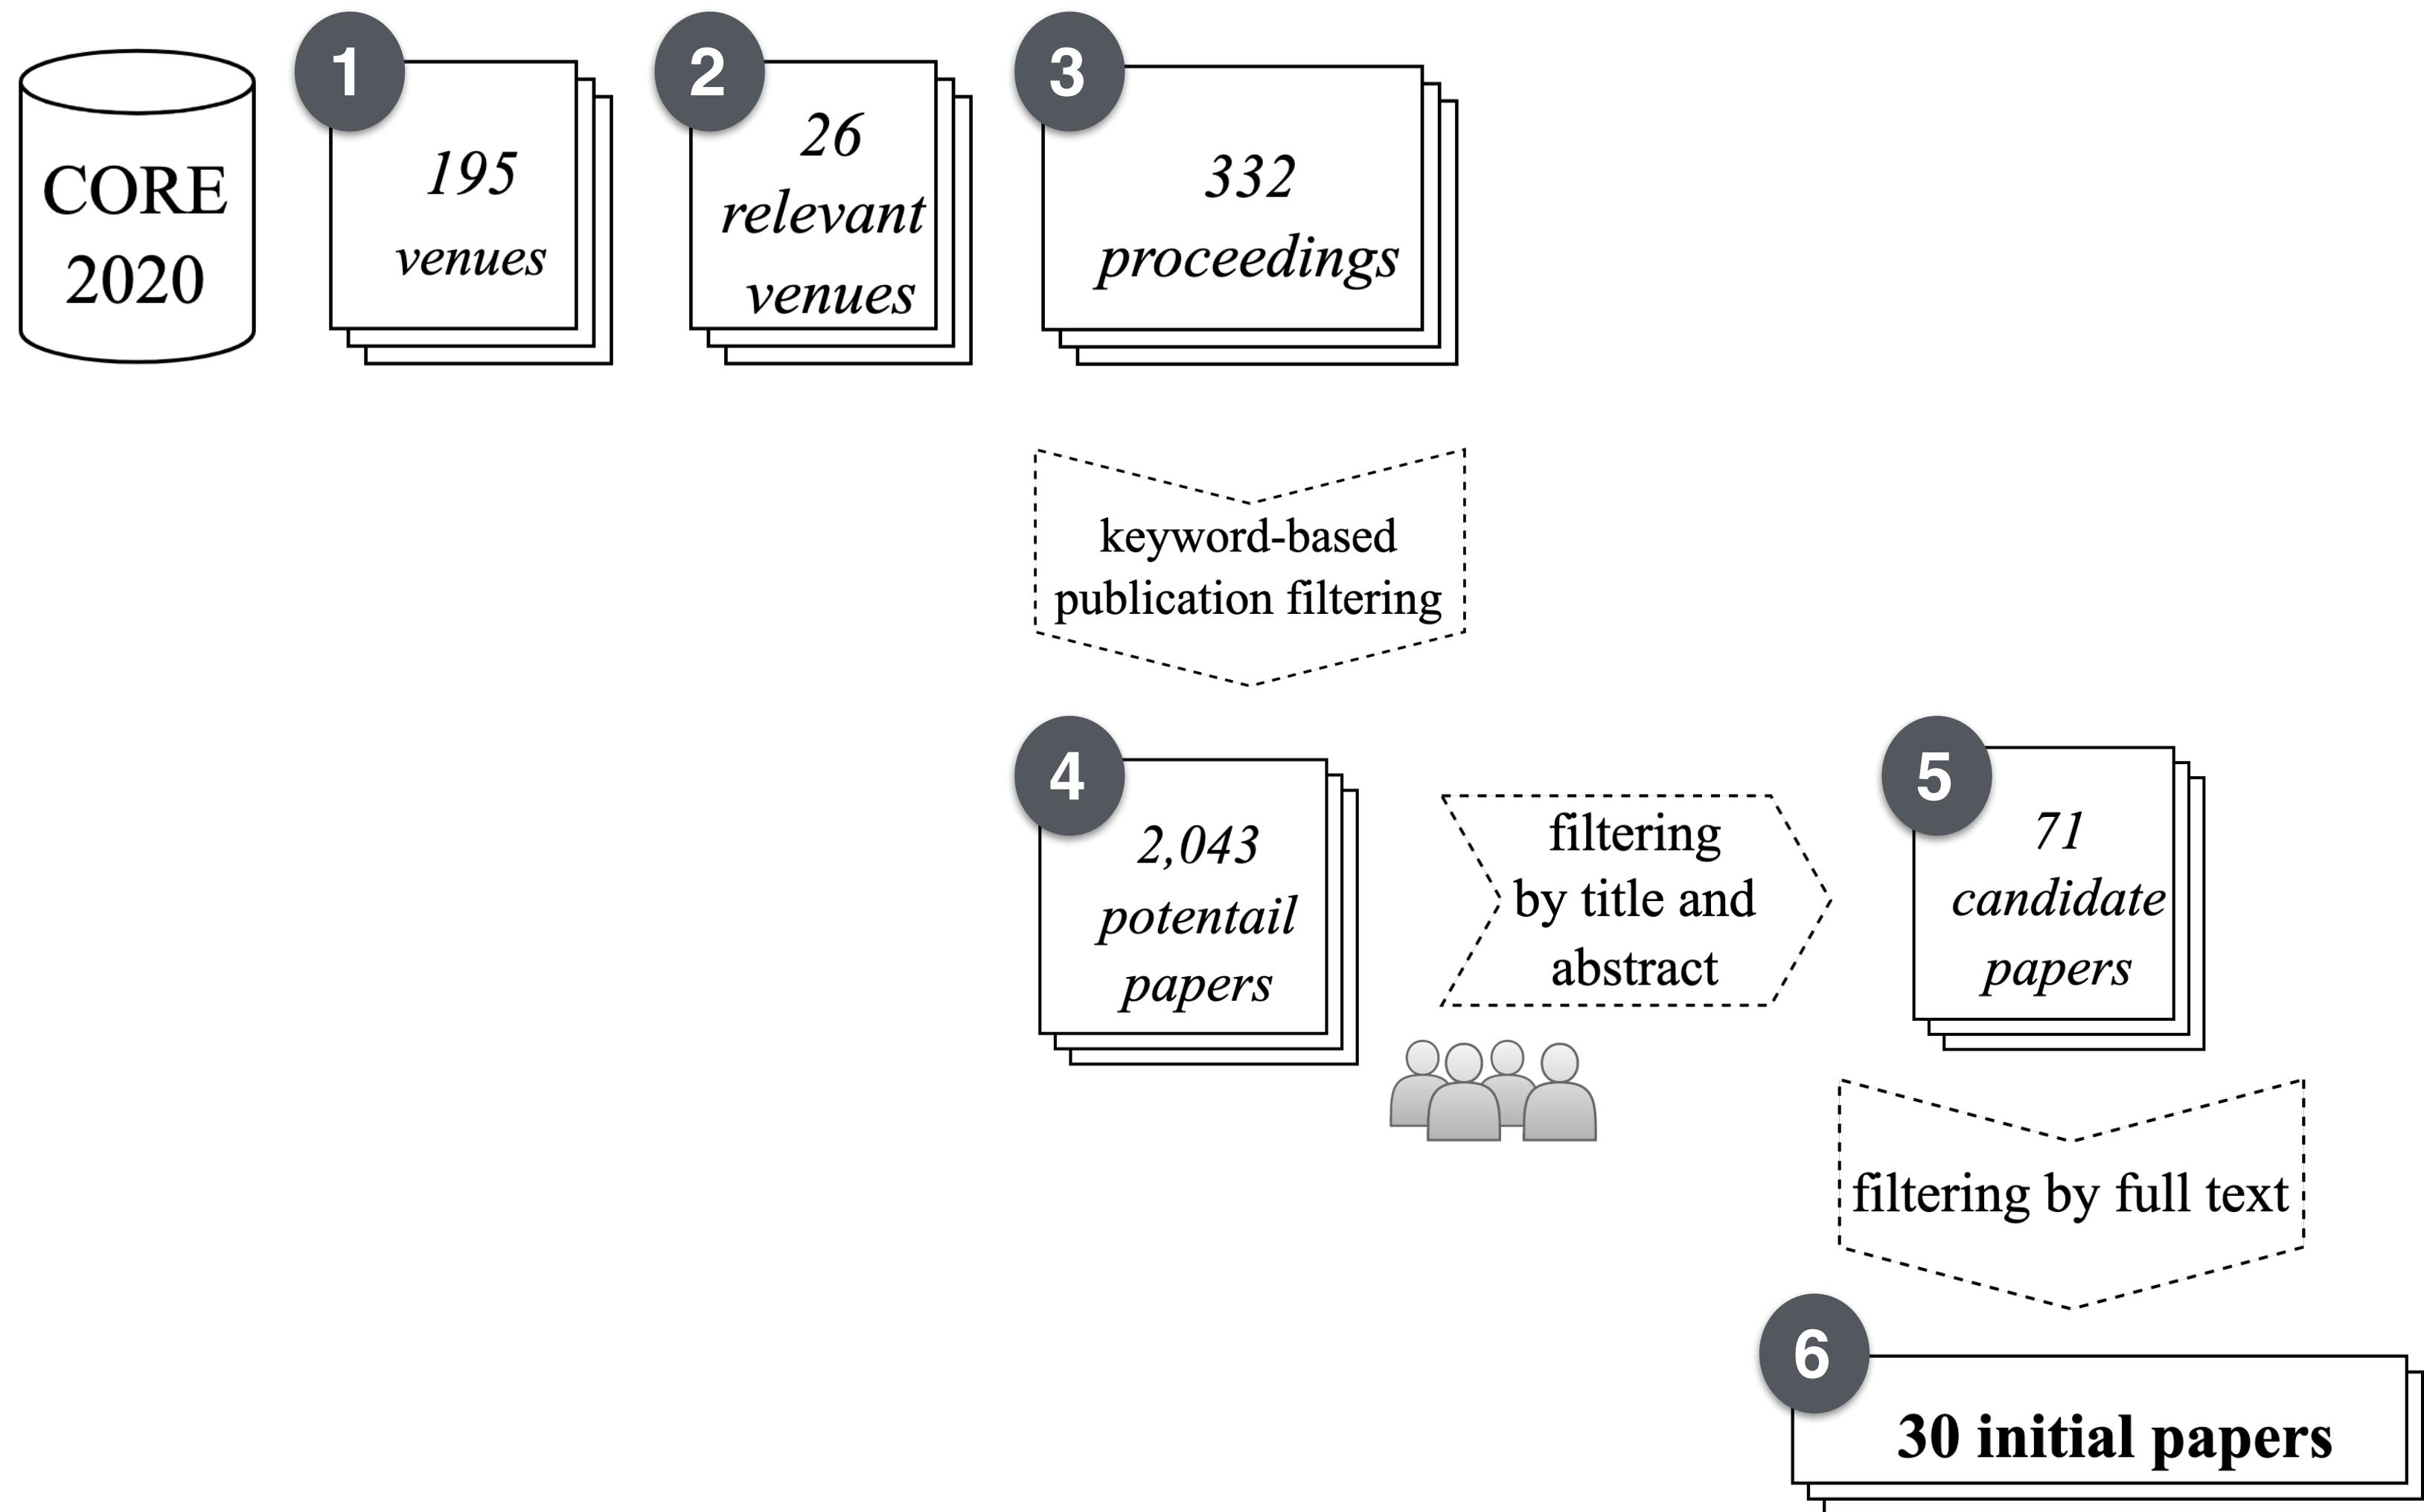

I represent a message to be scheduled by the WorldState.

For example, you can see me in action with the following example which print 'alarm test' on Transcript one second after evaluating the code:

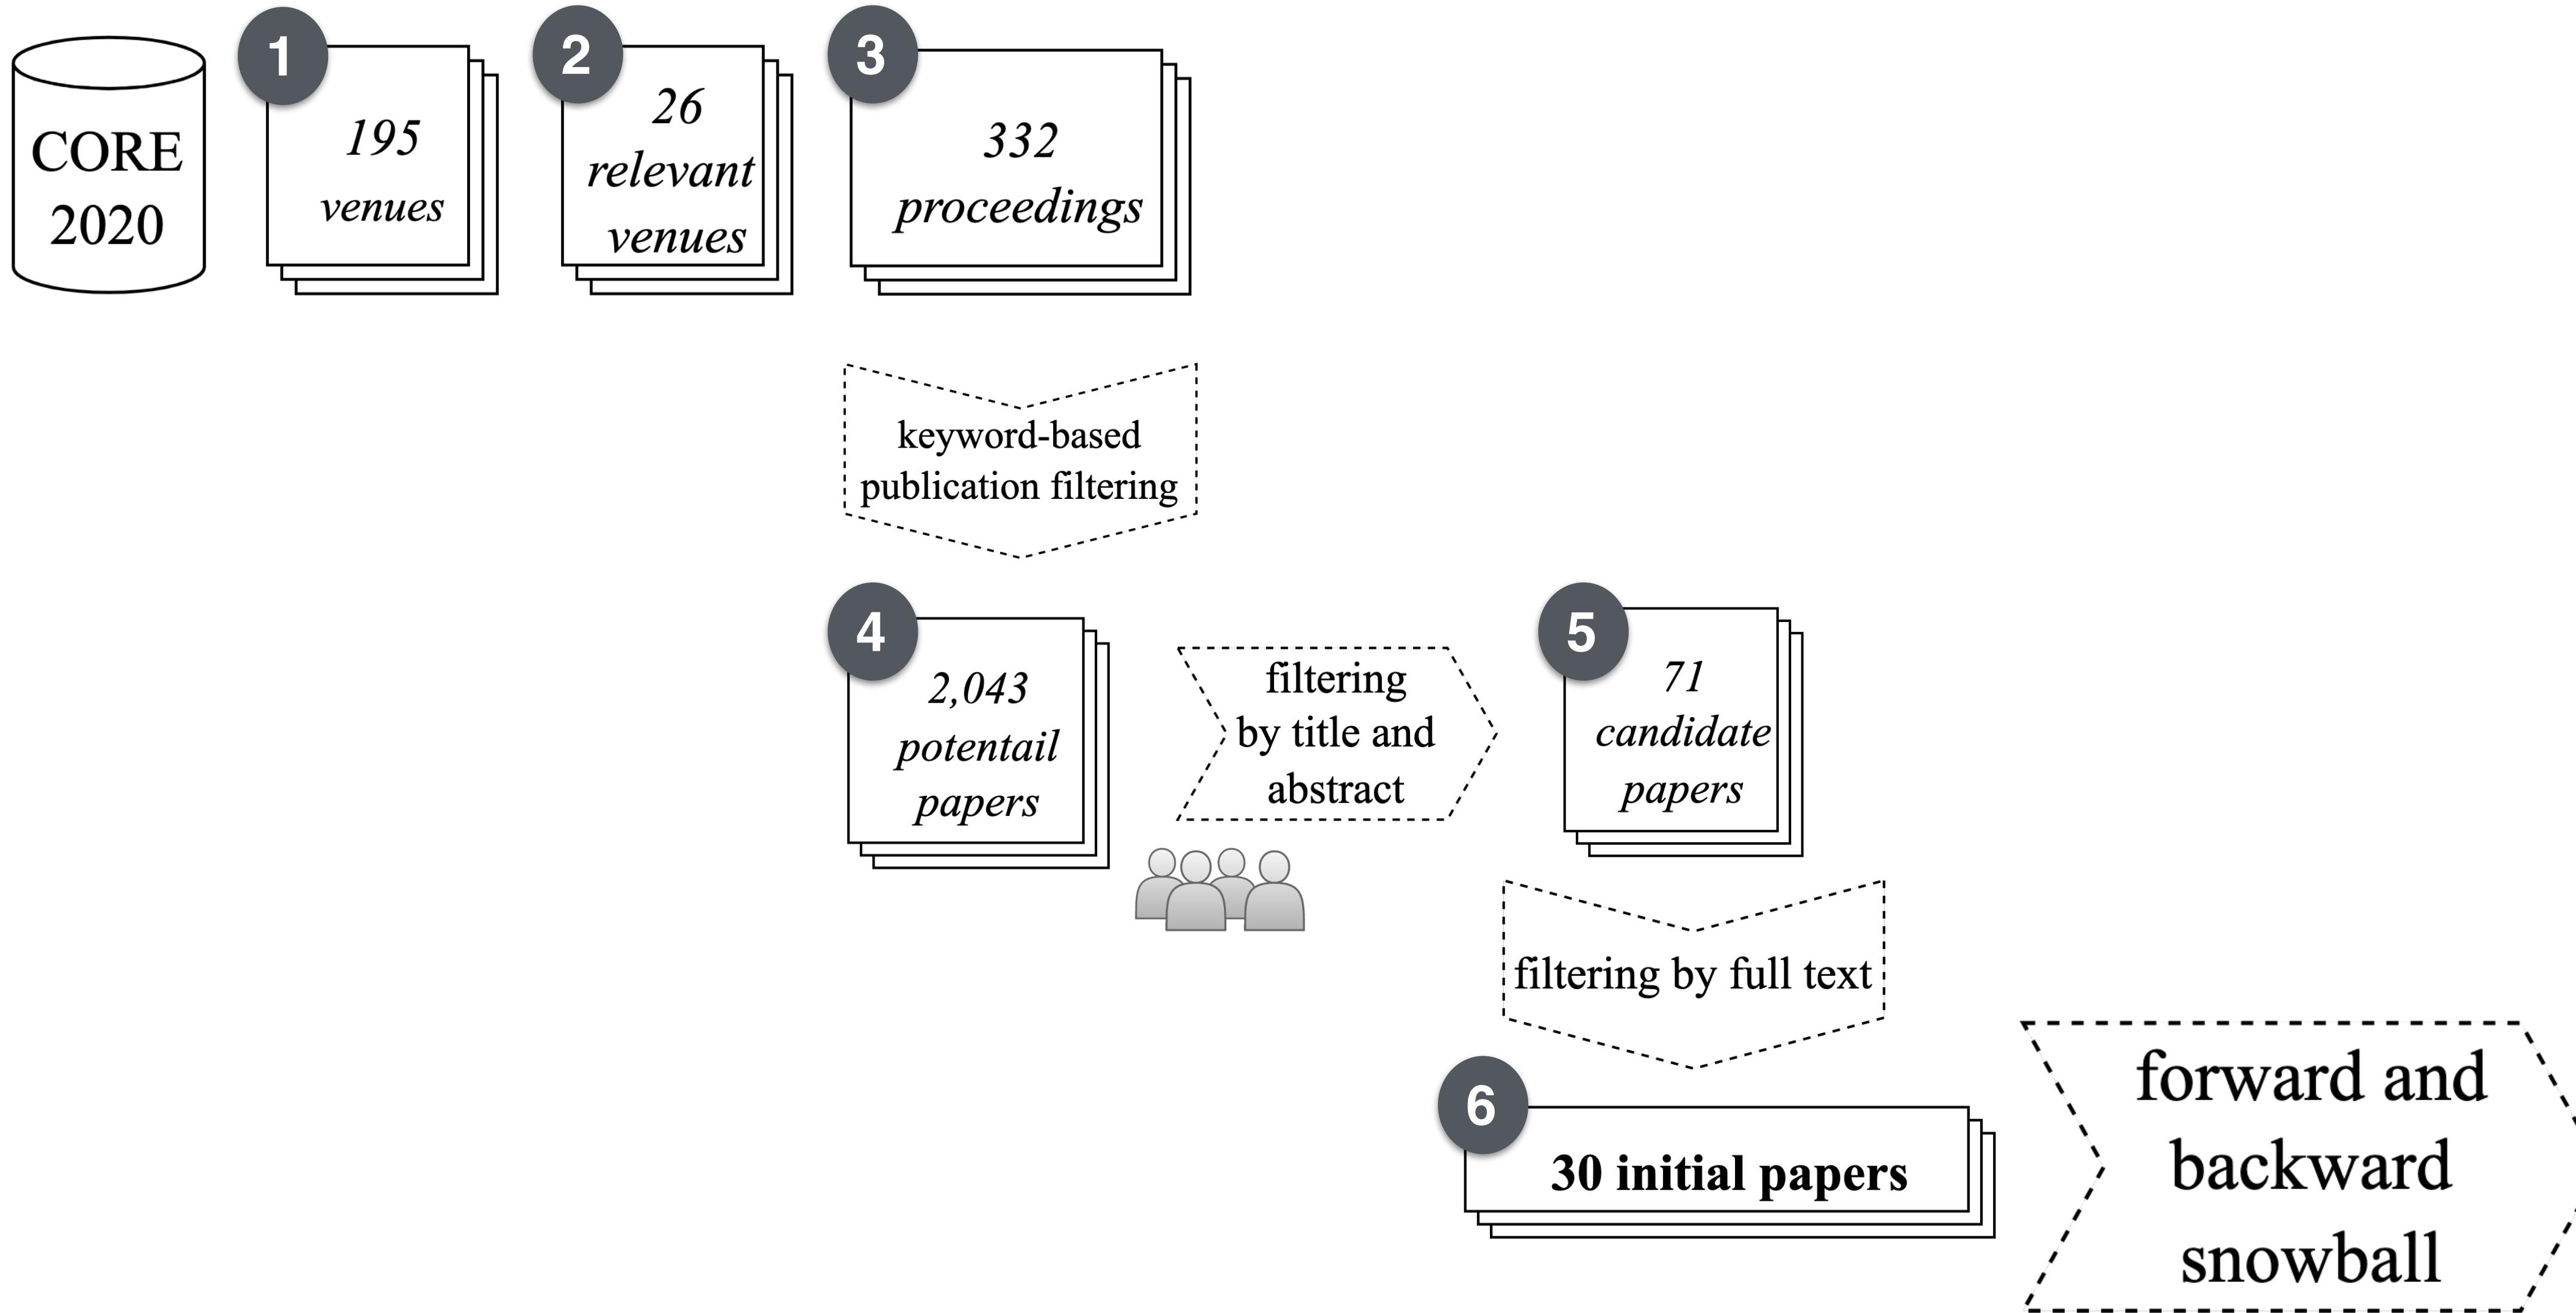

```
Transcript open.  
MorphicUIManager currentWorld  
    addAlarm: #show:  
        withArguments: #('alarm test')  
        for: Transcript  
        at: (Time millisecondClockValue + 1000).  
  
* Note *  
Compared to doing:  
[(Delay forMilliseconds: 1000) wait. Transcript show: 'alarm test'] forkAt: Processor activeProcess priority +1.  
  
the alarm system has several distinctions:  
- Runs with the step refresh rate resolution.  
- Alarms only run for the active world. (Unless a non-standard scheduler is in use)  
- Alarms with the same scheduled time are guaranteed to be executed in the order they were added
```

Methodology

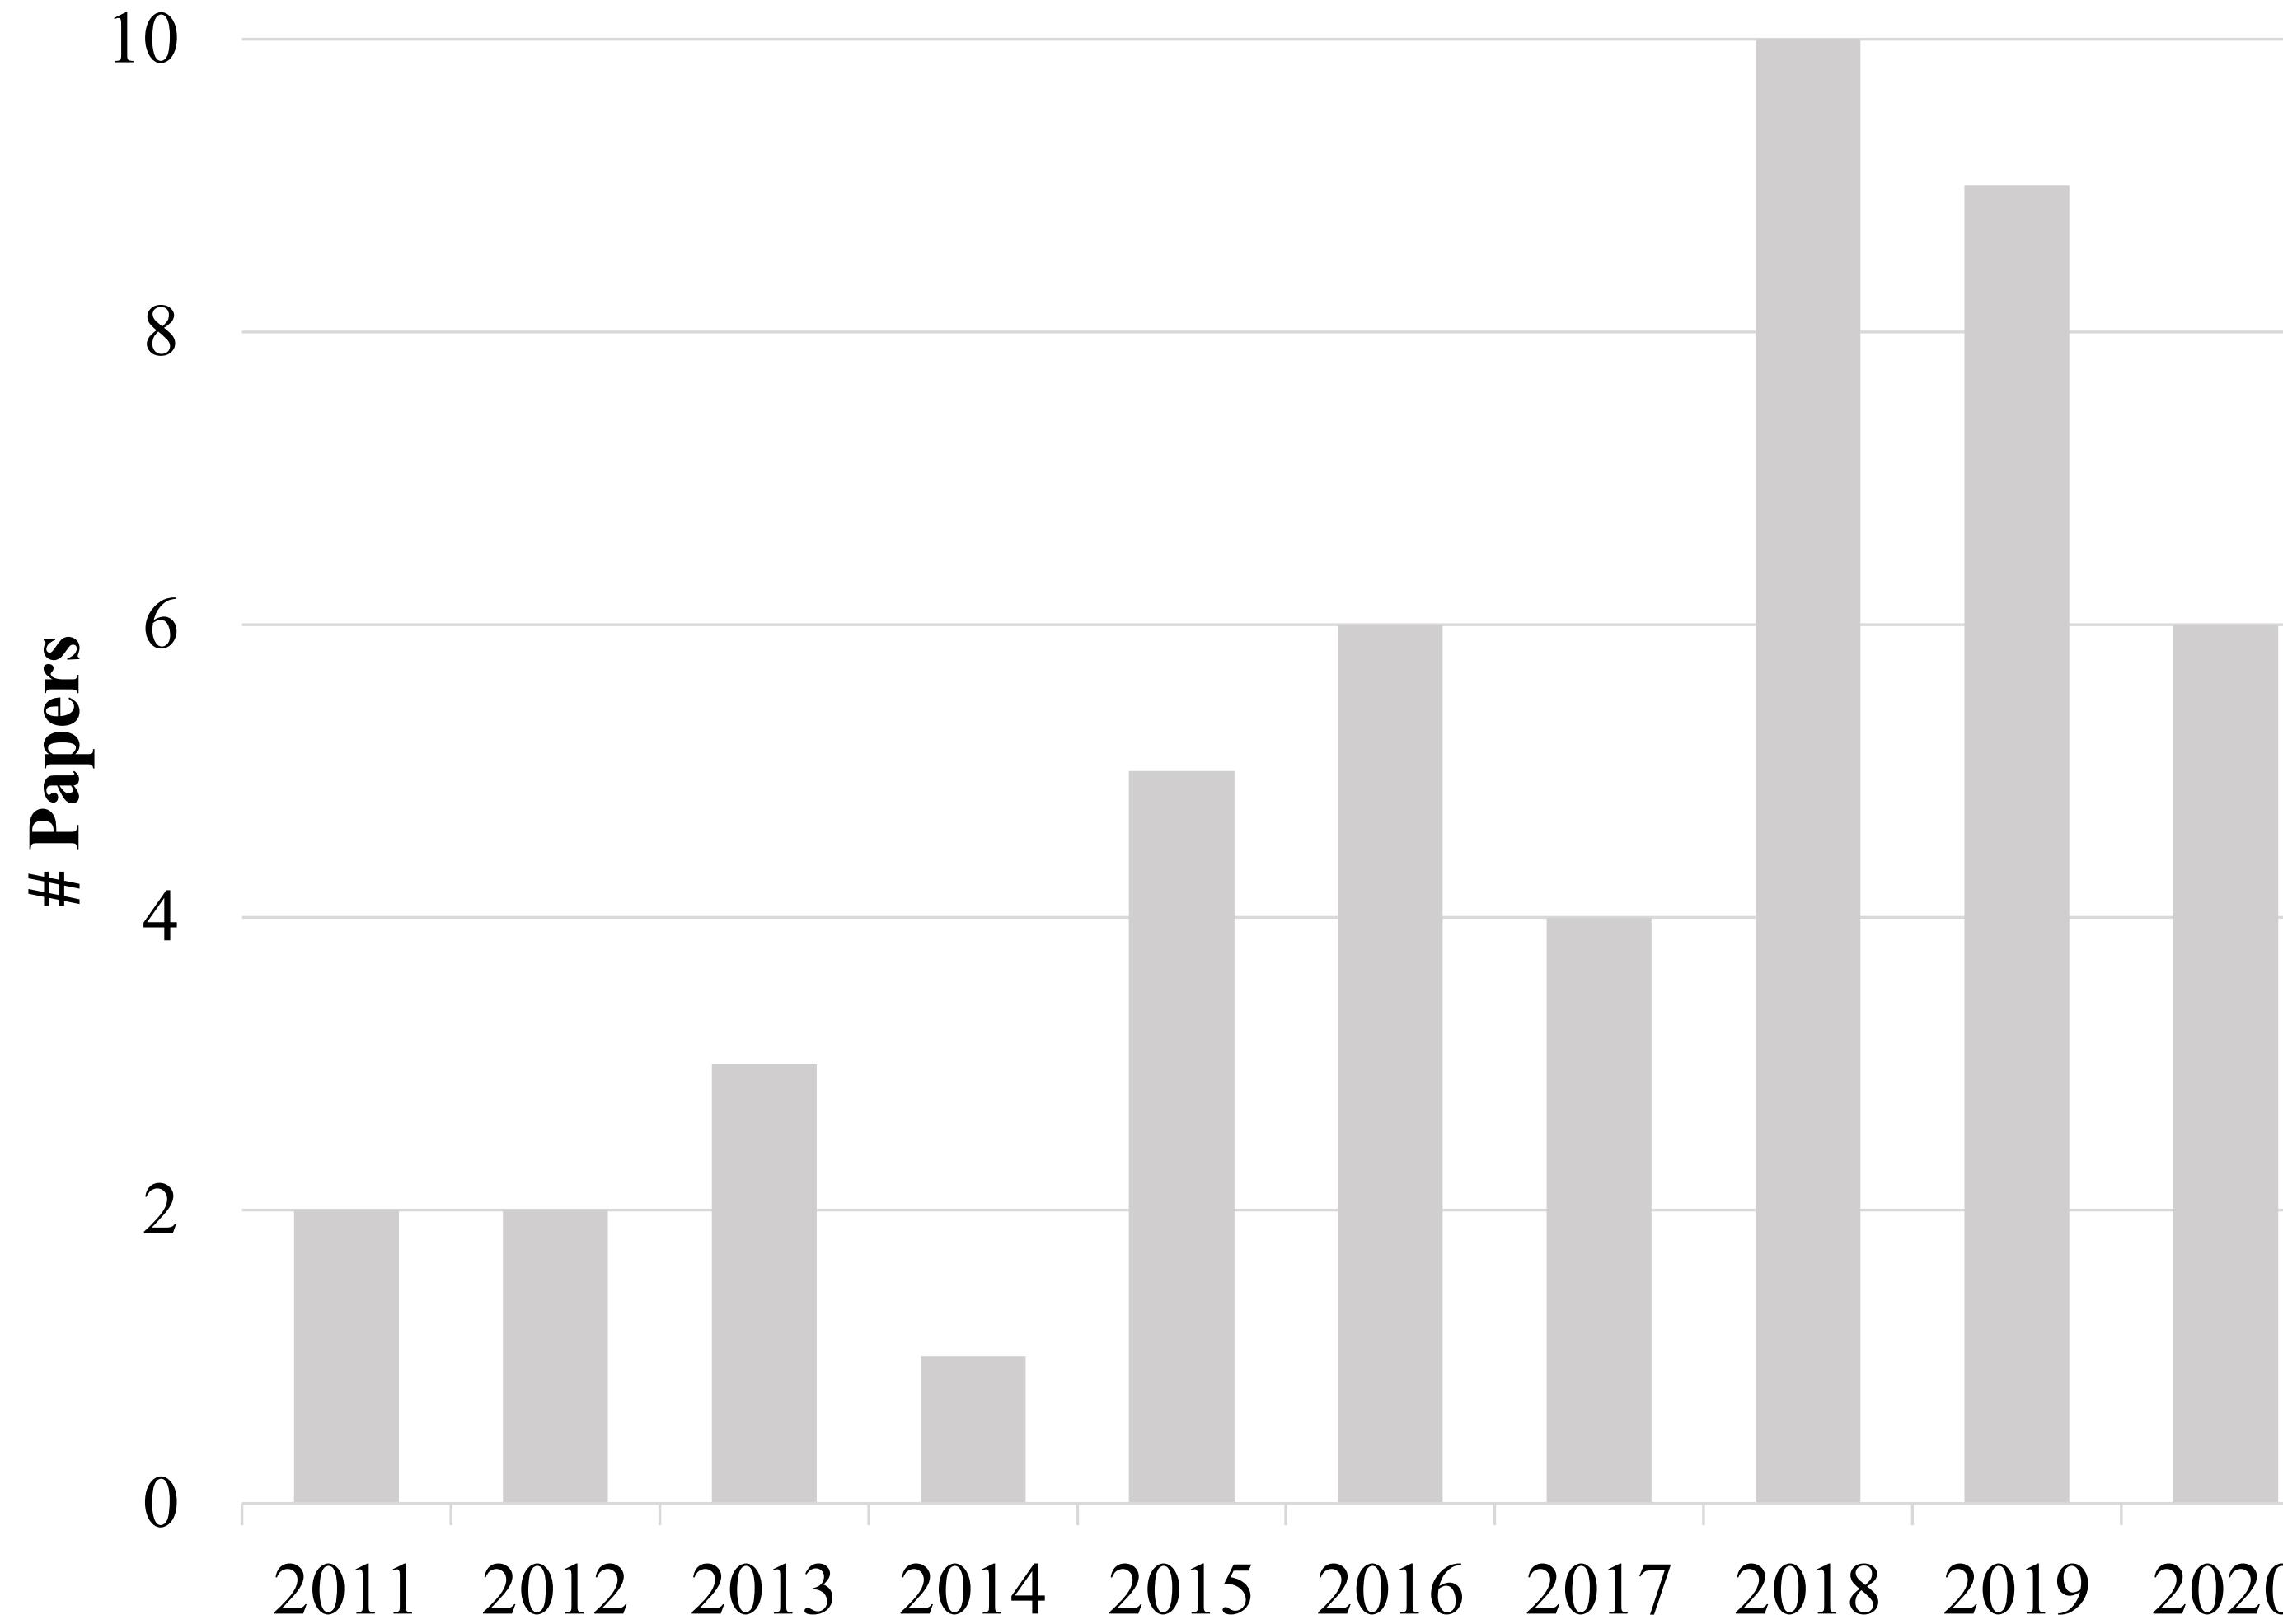

Methodology

Methodology

47 papers over years

Dimensions analyzed

Comment types

method comments, inline comments

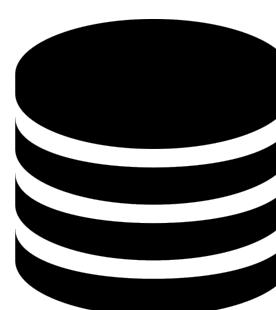

Quality attributes

consistency, completeness

Techniques

heuristic-based, machine learning-based

Data availability

tool, dataset

Code comment metrics

```
/**  
 * A class representing a window on the screen.  
 *  
 * For example:  
 * <pre>  
 *   Window win = new Window(parent);  
 *   win.show();  
 * </pre>  
 *  
 * @author Sami Shaio  
 * @version 1.13, 06/08/06  
 * @see java.awt.BaseWindow  
 * @see java.awt.Button  
 */  
class Window extends BaseWindow {  
    ...  
}
```

Consistency:
Overlap between the terms used in comment and code. Higher value of CIC with higher readability of that code.

Readability:
Flesch reading-ease test

Data availability

Nearly 50% of the studies still lack in the replicability dimension, as their respective dataset or tool is often not publicly accessible.
